

CEMENTED CARBIDE FOR ADDITIVE MANUFACTURING

DATA SHEET (PRELIMINARY)

Sandvik Additive Manufacturing Cemented Carbide is the same material as traditionally made with press and sintering methods and is used for its durability, wear resistance and productivity. Lifetime of cemented carbide is typically 3-20x that of the hardest steels. With additive manufacturing it now comes with the freedom to manufacture virtually any geometry.

GEOMETRIC CAPABILITIES (TYPICAL)

Max 20	Max 200x200x300mm, Typical <40x40x50mm		
0.5 to 30mm			
± 0.5 to ±1.0% of nominal dimension, min ±0.04			
Almost any			
L20mm*d0.8mm; L100mm*d1.2mm			
Ra 3.2			
H12N	H13F	H10F	
12	13	10	% w/w
-	<1	<1	% w/w
WC	WC	WC	% w/w

¹Not tested. Typical/Target values for reference

CORROSION RESISTANCE

Corrosion resistant at pH>7

APPLICATION AREAS

H12N	H13F	H10F
Wear parts	Metal cutting tools	Metal Cutting Tools
Nozzles	Wear Parts	Wear Parts
Mining and construction	Nozzles	Wire Drawing Nibs
Metal Forming tools		Nozzles

Disclaimer: Recommendations are forguidance only, and the suitability of the material for a specific application cannot be confirmed without test. Continuous development may necessitate changes in technical data without notice. Due to rapid development, presented data may be collected from test on specimen from different AM process generations or generic data sources. This datasheet is only valid for Sandvik materials.
